**Subject: Application for Senior Hybrid Mobile App Engineer**

Dear Hiring Manager

I am writing to express my strong interest in the **Senior Hybrid Mobile App Engineer** position at [Company Name]. With over a decade of software engineering experience and a specialized focus on building high-performance, cross-platform mobile applications, I am confident in my ability to immediately add value to your development team.

My technical expertise lies at the intersection of modern web frameworks and native mobile architectures. I have spent years perfecting applications built on the **Ionic and Capacitor** stacks, using **Angular** (from AngularJS/v1 to modern releases) and **React** to deploy seamless mobile clients. Beyond standard web wrapper implementations, I specialize in bridging the gap between web views and device-level hardware, having developed and published custom native iOS (Swift) and Android (Java) plugins—including a custom plugin for the XtremePush SDK. In addition to my core Ionic/Capacitor expertise, my experience extends to other leading hybrid frameworks, including **Flutter** and **React Native**, as well as desktop clients using **Electron**. Over the course of my career, I have successfully:

- Driven the lifecycle of multiple production-grade mobile applications shipped to the **Apple App Store** and **Google Play Store**.
- Refactored state management systems (such as **NGXS** at Computershare) to significantly decrease memory consumption and improve rendering speeds.
- Migrated legacy architectures (Cordova to modern Capacitor) while maintaining secure JWT and Firebase authentication protocols.
- Automated delivery pipelines using CI/CD services (Azure DevOps, App Center) to facilitate swift, stable releases.

I thrive in Agile environments and enjoy collaborating with cross-functional teams, UI/UX designers, and backend teams (with experience managing Python/Docker backends myself) to deliver feature-rich products that meet rigorous technical and commercial requirements.

I would welcome the opportunity to discuss how my hybrid mobile development expertise and native integration skills can support [Company Name]'s mobile product strategy. Thank you for your time and consideration.

Sincerely,

**Ricardo Watanabe Bento**
